

December 11, 1978

Mr. D. Smith  
Site Manager  
Ren Plastics Corporation  
5656 S. Cedar Street  
Lansing, Michigan 48209

Dear Mr. Smith:

As a result of our December 6, 1978 visit to your plant, it will be necessary for you to determine exactly where your wastewater is being discharged. If your sanitary sewage is not connected to the City of Lansing sanitary sewer, it must be done as soon as possible according to Act 208, Public Acts of 1972.

Your industrial wastewater (the contact and non-contact cooling water) may be left in the storm sewer. However, it will be necessary to obtain a discharge permit from us. Please complete the enclosed application. In order to complete this application, you will need to determine the flow and quality of this industrial wastewater and where it is going. It is also necessary to report the use of any of the critical materials on page three of the application (even if they do not get into the water). Please indicate by a sketch or drawing the sources of industrial wastewater in the plant, and where they discharge.

Please respond in writing to this office by January 15, 1979 and indicate where your sanitary sewage is being discharged now, and give a firm date when you plan to connect it to the sanitary sewer. You should submit the discharge permit application to us no later than January 30, 1979.

If you have any questions, feel free to call us at 322-1637.

Very truly yours,

WATER QUALITY DIVISION
